

JACK LINDER

*To audience.*

So if you look to the tank on the left you can see some Moon Jellyfish. Do you see how transparent they are? Water actually accounts for 70% of its body composition. Interestingly enough-

BENJY

It's 95%.

JACK

...Sorry?

BENJY

95%. Water makes up 95% of the moon jellyfish. It moves by pulsing its body or riding the natural currents of the ocean.

JACK

Oh... my mistake. Thanks.

*Back to audience*

Anyway, Moon Jellyfish actually only reproduce in the summer.

BENJY

*Interjecting*

Yeah, that's when the male jellyfish releases all of its sperm into the sea and then it dies. Luckily humans aren't like that, or else the males wouldn't live that long, and then there would be mostly females on the planet.

JACK

Wow, is that true?

BENJY

Yeah.

JACK

I don't remember seeing that on the fact sheets I have. Guess I gotta tell the boss to update them...

BENJY

Maybe your boss isn't getting information from the best sources.

JACK

Yeah well what are your sources, Mr. Fish-man?

BENJY

My name is Benjy Rose.

JACK

Hm, you seem more like a Mr. Fish-man to me.

BENJY

Why?

JACK

You seem to know a lot about fish.

BENJY

I do. I read lots of books. And I watch Nat Geo Wild. But I don't use Wikipedia because it isn't trustworthy.

JACK

Huh. Seems like I could learn a thing or two from you... Well, we gotta move on to the next exhibit. Maybe I'll see you around Mr. Fish-man?

BENJY

See you later, Jack.

JACK

How did you know my name?

BENJY

It's on your nametag.

JACK

Oh, yeah... right. This is my first day.

BENJY

You should also tell your boss that your nametag has an incorrect drawing of a crab. That crab has eight legs, but crabs have ten legs because they are a member of the Decapoda order.

JACK

Right... yeah... I'll let him know.
